SUMMARY

Analytics Consultant with a B.S. in Computer Science who starts from the business question, finds a control before trusting a number, and explains the result so anyone can act on it. I learned marketing by running a family business's ads with my own money, managed 50+ ad accounts at an agency, and now own the SQL, BigQuery, and dashboard work for a team serving global luxury and retail brands at fifty-five (Brandtech Group): measurement, root-cause investigation, dashboards leadership relies on, and automation. Notable result: showed a 51.5% organic revenue drop was a tracking relabel, not lost sales.

Certifications: AWS Certified Cloud Practitioner | Google Advanced Data Analytics | Microsoft Power BI Data Analyst Associate | Google Analytics Certification

EXPERIENCE

Analytics Consultant **Feb 2026 – Present**
fifty-five (Brandtech Group), New York, NY

- **Estimated $2.7M to $5.9M in annual incremental revenue** from iOS deep linking in paid search for a national retailer, separating real lift from organic cannibalization in GA4 and BigQuery. The result reshaped the channel budget.
- **Showed a 51.5% organic search revenue drop** ($0.8M in two weeks) was a tracking relabel, not lost sales, by comparing 24M sessions before and after a site change in BigQuery, controlled with last year's dates and reconciled to GA4.
- **Built an end-to-end GA4-to-Power BI pipeline** for a global luxury retailer's APAC sites: eight fact tables and 100+ DAX measures behind a five-page dashboard, top KPIs for regional leadership and channel, product, session, and user views for analysts.
- **Found $3.15M more quarterly revenue** in centralized-fulfillment stores than in matched standalone stores (20.8M sessions in BigQuery, 18.4% higher conversion), after fixing a store-ID bug that put 19 treated stores in the control group.
- **Caught 767K bot sessions, 20% of traffic,** hiding in a luxury client's US Direct channel through GA4 engagement and geo signatures, and built the exclusion segment that restored the true conversion rate (0.7% to 0.9%).
- **Cut dashboard build time to about 1 hour** from about 16 by automating the build with Claude, a method the team has now used on at least five Power BI and Looker Studio dashboards.
- **Own the SQL and BigQuery work** for a seven-client team: millions of GA4 and Adobe events across years of data, root-cause investigations, and every figure validated against the raw tables before it reaches a stakeholder.
- **Connect the business side to the technical side** of every project: executive questions become clear requirements for engineers, and analysis becomes a simple story leadership acts on.

PPC Analyst **Aug 2025 – Feb 2026**
Conduit Digital, Toms River, NJ

- **Managed 50+ Google Ads and Microsoft Ads accounts** across B2B, local services, e-commerce, and lead gen on a $300K+/month portfolio, structured by funnel stage and geography to hit CPL, ROAS, and volume targets.
- 300+ conversions a month, up from about 200, for a national glass manufacturer on a flat $20K budget, by reallocating spend with GA4 journey analysis and HubSpot lead-quality data.

Marketing Analyst (part-time during B.S.) **Jan 2023 – Aug 2025**
Drive Up Driving School, Iselin, NJ

- **Built the family business's paid acquisition engine** from scratch (Google Search, Display, Performance Max, Meta) with GA4 and GTM tracking from query to booking, growing monthly revenue from about $6K to $20K+.
- Ran continuous A/B and multivariate tests on ads, offers, and landing pages, using Z-tests to pick winners, for a lift of about 60% in lead-to-signup conversion and 45% lower lead costs.

Data Analyst **Sep 2024 – Dec 2024**
Merck Pharmaceuticals, Remote

- Engineered an Azure notification engine with Power Automate, SharePoint, and Dataverse that processes thousands of daily emails, saving about 4,300 hours a year ($200K+ in labor), and presented it to Merck's COO with Power BI dashboards.

MACHINE LEARNING PROJECTS

Twitter & Reddit Sentiment Analysis | Python, BERT, AWS, Docker, Streamlit

- Fine-tuned BERT to 91% accuracy on 1.6M tweets for entity-level sentiment and ran it on a production AWS pipeline (Lambda, S3, ECS, Batch) with weekly retraining and a Streamlit dashboard.

SKILLS

Data & Querying: SQL (window functions, optimization), BigQuery (GA4 event export, fact tables), Python
Analysis & Experimentation: incrementality, matched-control and quasi-experimental methods, A/B and multivariate testing, Z-tests, root-cause investigation
Dashboards & BI: Power BI (DAX, star-schema data models), Looker Studio, KPI definitions
Analytics & Marketing Platforms: GA4, Adobe Analytics, Google Tag Manager, Google Ads, Microsoft Ads, Meta Ads, HubSpot
Generative AI & Cloud: Claude-automated dashboard builds, AWS (Lambda, S3, ECS), Docker, Streamlit

EDUCATION

B.S. in Computer Science, *New Jersey Institute of Technology, Newark, NJ* | December 2024
Dean's List: 4 Semesters | Key Coursework: Data Mining, Data Structures & Algorithms, Artificial Intelligence, Machine Learning
